## Introduction

**Electric Vehicle** Token is a unique token with features like state of the art technology and built to create a greener and safer future. This token is going to be used for validating and approving the authenticity of vehicles and their charging infrastructure.

We invented a customer-focused Token/Currency called as "EV Token" for making the world greener and safer by using EV Networks. We use modern technology that helps in understanding and promoting our product better. It works as a decentralized currency that helps in identification of vehicles and charging infrastructure through EV token.

A key mission for our enterprise is to become the first global company specialized in electric vehicle technology, its applications and industry services. A great many of people are foreseen to be using electric cars (EVs). The expansion of the number of electric cars grouped into the same area may present a safety hazard due to the possible electrical interference between vehicles. This problem can be addressed by implementing an access control system with radio frequency identification (RFID) technology used to identify each vehicle. Instead of visually checking whether or not he or she is allowed to enter or leave a safety-critical space, the individual present shall only need to communicate.

We have made our Ev ecosystem in a way that people can earn using our system not only by trading but by riding or driving the vehicle to reach the target as mentioned. This is possible through our Ev token generator(miner). Its a device just like asic or gpu miners which is an IOT Device which is connected to vehicle which monitor ,how more we use and more we drive or ride we make more token. we called it proof of ride.

Lets us unite together to start a new trend caled EV and make our future greener and safer.

# How does EV Token Works?

Ev is an open-source platform that enables the creation and distribution of virtual assets. Ev tokens are a platform utility token, and unlike other cryptocurrencies, they are designed to facilitate a wide range of transactions on the Ev platform, including the payment of transaction fees for the transactions on the Ev platform. Ev tokens are designed specifically for the Ev platform. Ev tokens do not represent a cryptocurrency.

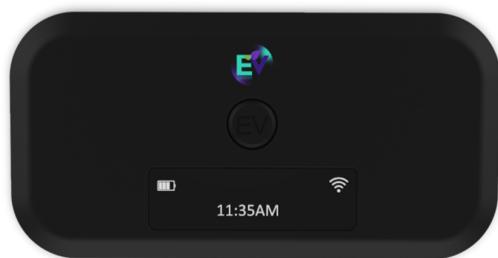

In the simplest terms, Ev tokens are a combination of a currency (USD) and a payment method. When a user purchases an Ev token, the user buys currency (USD) in increments of \$1. The user then exchanges that currency for Ev tokens. As the user performs transactions on the Ev platform, the user pays a fee in Ev tokens. The Ev platform passes the Ev tokens to the sender and the receiver of the transaction.

The Ev platform is deployed on Binance Smart chain. Ev tokens can be exchanged for conventional currency through the Binance decentralized exchange. Ev Tokens are the first virtual assets built specifically for the web on the Binance blockchain.

Ev tokens are distinct from conventional cryptocurrencies in that they are designed to facilitate a wide range of transactions on the Ev platform, including the payment of transaction fees for the transactions on the Ev platform.

Ev tokens are BEP20 compliant. The Binance blockchain is a permissionless, decentralized, public blockchain using blockchain technology to record transactions and incentivize network nodes. The blockchain is replicated on thousands of servers around the world, forming a decentralized network.

# Our Ecosystem

# Why EV Token?

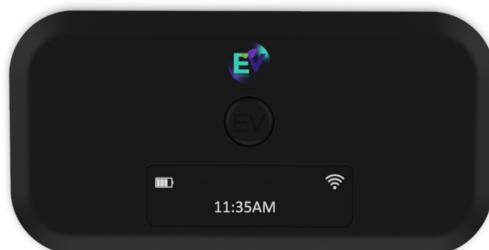

My Ev App

Spend on charging

Trade

My Ev Token Generator(miner)      Trade and Grow More

Drive More Earn More

Ride More Earn More

Generate More Earn More

# Tokenomics

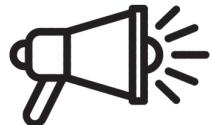

Total Supply  
889.8 Billion

Transaction fee detail:  
- 5% of all transactions  
redistributed to all holders  
of EV  
- 5% of all transactions  
redistributed to liquidity

Token Type:  
Deflationary

Marketing/Dev : 7%

Total Transaction Fee:  
10%

Presale supply: 20%

Team Share: 20.25%

# Roadmap

Oct 11 2021

Smart Contract Publishing  
Token Contract Deployment

Completed

Oct 11 2021

Listed on Poo coin and Coin Alpha

Completed

Marketing on Coin alpha  
Processing

## Phase 1

Oct 11 2021

Launched on pancake swap

Completed

Oct 25 2021

Website and Social Media Page

Completed

2021

## Phase 2

Air Drop and  
ICO to Electric Vehicle  
Startups

Android and Ios Ap Development

Presale

Listing on Coin Market Cap,  
CoinGecko

Mobile App Official Launch

Expand our network  
(EV companies  
EV home charging stations, and more)

My Ev Token Generator  
Prototype (miner)

Deploying on an Electric Vehicle

2022 Target

# ELECTRIC VEHICLE TOKEN

Version 1.0

## THANK YOU !

For being part of the best community
